

Deworming Protocol

Fecal egg counts (FEC) provide us with valuable information that help us evaluate the efficacy of de-wormers being used and determine the best deworming treatment plan for your horse. Spring and Fall are peak transmission time, by doing a FEC during these times and following a deworming protocol we can minimize pasture contamination and prevent parasitic disease and resistance.

Adult LOW Shedder Treatment Plan

Below 500 EPG on Fecal Egg Test
